ABSTRACT PHOSPHITYLATION PROCESS

A process for the phosphitylation of an alcohol or thiol with a phosphitylation agent in the presence of an activator is provided. The activator has the formula:

$$(R)_{p} = \bigvee_{0}^{X^{7}} N - H$$

wherein p is 0 or an integer from 1 to 4 and R for each occurrence is a substituent.

Preferably X⁷ is O and p is 0. The activator is commonly employed as a salt complex with an organic base. Preferred alcohols or thiols include nucleosides and oligonucleotides. The process is particularly suited for the synthesis of phosphoramidites.
